

Null simulation, chr22, 250 kb blocks: block 75 (34.55−34.80 Mb, 127 SNPs). True GWAS LD: w x EUR + (1 − w) x ASN from the discovery cohorts (n 5070 / 2701), the LD the null z−scores were simulated with. PRS−MIX LD: the same blend of the reference panels; EUR panel LD: standard PRS−CS.
Mean |difference| from the true LD, off the diagonal:

90:10 PRS−MIX 0.011; EUR panel alone 0.021; ASN panel alone 0.169 (block rank by EUR−panel misfit: 27 of 137)
70:30 PRS−MIX 0.010; EUR panel alone 0.056; ASN panel alone 0.131 (block rank by EUR−panel misfit: 17 of 137)
50:50 PRS−MIX 0.011; EUR panel alone 0.093; ASN panel alone 0.094 (block rank by EUR−panel misfit: 16 of 137)
