

Null simulation, chr22, 250 kb blocks: block 75 (34.55−34.80 Mb, 144 SNPs). True GWAS LD: w x EUR + (1 − w) x AFR from the discovery cohorts (n 5070 / 205), the LD the null z−scores were simulated with. PRS−MIX LD: the same blend of the reference panels; EUR panel LD: standard PRS−CS.
Mean |difference| from the true LD, off the diagonal:

90:10 PRS−MIX 0.013; EUR panel alone 0.029; AFR panel alone 0.200 (block rank by EUR−panel misfit: 7 of 138)
70:30 PRS−MIX 0.022; EUR panel alone 0.074; AFR panel alone 0.157 (block rank by EUR−panel misfit: 9 of 138)
50:50 PRS−MIX 0.034; EUR panel alone 0.120; AFR panel alone 0.116 (block rank by EUR−panel misfit: 10 of 138)
