

Null simulation, chr22, 250 kb blocks: block 75 (34.55−34.80 Mb, 143 SNPs). True GWAS LD: w x EUR + (1 − w) x SAS from the discovery cohorts (n 5070 / 132), the LD the null z−scores were simulated with. PRS−MIX LD: the same blend of the reference panels; EUR panel LD: standard PRS−CS.
Mean |difference| from the true LD, off the diagonal:

90:10 PRS−MIX 0.015; EUR panel alone 0.018; SAS panel alone 0.108 (block rank by EUR−panel misfit: 18 of 138)
70:30 PRS−MIX 0.025; EUR panel alone 0.037; SAS panel alone 0.091 (block rank by EUR−panel misfit: 30 of 138)
50:50 PRS−MIX 0.036; EUR panel alone 0.059; SAS panel alone 0.077 (block rank by EUR−panel misfit: 33 of 138)
